SECTION V

GENERAL AND SCOPE OF WORK

1. BACKGROUND INFORMATION:

1.1. FIJI ELECTRICITY AUTHORITY:

The Fiji Electricity Authority is a wholly Government owned statutory body that was established under the Fiji Electricity Act of 1966. FEA is responsible for the Generation, Transmission, Distribution, and Retail of electricity on the two larger islands, Viti Levu and Vanua Levu, and also on the island of Ovalau and Taveuni, which account for some 90% of the Country's population.

It has a Total Generation Capacity of approximately 290MW and has a total of 145km of 132kV transmission line, 350km of 33kV line and more than 8,000 of 11kV line.

The Total number of Power Stations, Substations and offices at each Islands is listed in the table below.

	Site Category	No. of offices, Power Stations and Substations			
		Viti Levu	Vanua Levu	Ovalau	Taveuni
1	Power Stations	11	3	1	2
2	Substations	29	3		
3	Office	8	1		
	Total	48	7	1	2

These Substations and Power Stations are connected to the server via the SCADA LAN at NCC and Navutu.

1.2. OBJECTIVES BEHIND THE TENDER

The proposed project intends to improve the efficiency of the SCADA operations by upgrading its local area network. To achieve this, the existing SCADA LAN equipment's need to be upgraded. A Cisco router (2921) and 24 port 3560 switches which at times have been has proved very reliable in operation and much of the FEA's business is now carried over it, but the Layer 2 switching technology have served its purpose and needs to be upgraded to Layer 3 as business requirements dictates.

The main objectives for the refresh are to significantly improve the following:

1. **Resilience.** Although the existing equipment has been very reliable, the network design has a single point of failure which can now be mitigated by new technologies introduced into the market.
2. **Operations Reliability.** The technologies with built in hardware redundancy, it will ensure that operations are not affected in time of outages and allows Controllers to manage the system effectively.
3. **Ease of Integration.** The new routers with asynchronous/synchronous interface options will ensure that serial devices are connected directly to the routers rather than using third party equipment.
4. **Future-proofing.** Demand for bandwidth by real time applications means that the present switching architecture is likely to limit operational activities. The replacement equipment will cater for current and future operational needs of our National Operational Centre.
